Product importer

Create or update products in bulk via CSV.

Required scope: manage_products, view_products, view_customers

(https://github.com/sphereio/sphere-node-product-csv-sync#import)

Required arguments

Products import as CSV

drop file

Clothes.csv (64.3 KiB)

Optional arguments

Please note that when importing localized fields (https://github.com/sphereio/sphere-node-product-csv-sync#localized-attributes) (eg. product name), you have to provide all languages or the missing ones will be deleted.

en

Language to use for references during import (default is en)

List of comma-separated attributes to use when creating products (ignore when updating)

,

The delimiter type used in the csv

;

The delimiter type used for multi value cells in the csv

For product import with different encoding than utf8 you can choose one of these encodings (https://github.com/sphereio/sphere-node-product-csv-sync#export-with-different-encoding) and set it in the following input.

utf8

Encoding to use when reading import file (default is utf8)

- ☐ Continue on problems
- ☐ Won't create any new products, only updates existing
- ☐ Do not show which headers are missing per ProductType
- ☐ Allow to remove variants that are not listed in CSV
- ☒ Publish all changes immediately
- ☐ Publish only current changes immediately
- ☐ Run in verbose mode
- ☐ Run in debug mode
- ☐ Dry run (list all actions but not POST them to commercetools platform)

id

Product attribute name which will be used to match products. Localized attribute types are not supported for matching. Possible values: id, slug, sku or custom_attribute_name. Selected language will be used for matching by slug attribute.

csv

Import file format

Ready?

Run command

Output

```
(node:37952) Warning: Accessing non-existent property 'padLevels' of module exports inside circular dependency
(Use `node_bin --trace-warnings ...` to show where the warning was created)
